Console and Visual Flame Room Heaters

Empire Vented Room Heaters are crafted for visual appeal and maximum efficiency. Room heaters make ideal replacements for traditional woodburning or coal-burning heaters. Just like a wood stove, they use room air for combustion. Vent pipes connect the heater to a chimney or flue to carry the by-products of combustion outside. Empire Vented Room Heaters are designed for quiet operation. The curved combustion chamber design minimizes noise while the burner ignites the gas immediately as it enters the burner port for added efficiency. Electricity required for operation.

Vent-Free Fan Convectors

Rinnai®

RESIDENTIAL ZONE HEATING

For rooms that are hard to heat, Rinnai Vent-Free Fan Convectors are the perfect solution. They incorporate a convection fan that evenly distributes warm air throughout the space, providing comfort even in faraway corners. Temperature output control maintains efficiency when heat isn't needed. By eliminating vents or ducts, places where heat typically gets lost, virtually all the warm air gets delivered to the room—making for a solution that's 99.9 percent efficient. In fact, the Rinnai Vent-Free Fan Convector is one of the most fuel-efficient heating products on the market today. Using either natural gas or liquid propane fuel, it can significantly reduce energy bills.

Rated at 99.9 percent efficient, vent-free heaters release nearly all of the available heat energy into the room. To ensure safe operation, all vent-free systems include an Oxygen Depletion Sensor (ODS) to automatically turn off the heater if room oxygen level drops to an unsafe level. Vent-free systems are designed to provide supplemental heat and may not be used as a primary heat source. No electricity required.

Portable Buddy Heaters

North America's Most Popular Portable Propane Heaters! These patented radiant Liquid Propane heaters connect directly to 1 lb. or 20lb cylinders (with hose adapter) and are the perfect solution for heating enclosed spaces from tents to cabins. The expertly engineered size to BTU ratio is augmented with a fold-down handle to give these heaters maximum output while retaining a minimalistic footprint. A swivel regulator gives you the ability to adapt usage from a disposable cylinder to a remote gas supply with the purchase of a hose and filter. To light the unit, simply rotate the knob to pilot and push. Then the integrated Piezo sparking mechanism will take care of the rest. With the Oxygen Depletion Sensor (ODS) and accidental tip-over safety shut-off, you can be sure that you will enjoy years of comfortable indoor safe heat.

Construction Heaters

The RED DRAGON® Construction Heater's rugged design is perfect for temporary heating of warehouses, construction sites, machine sheds, and more. These heaters require NO ELECTRICITY and are fueled by clean, efficient propane. All models come with complete safety features, are Made in the U.S.A., and are not sold online.

- Unique & efficient design forces heat downwards to keep the work area warmer
- Heavy gauge steel construction - built to last
- Low-profile prevents tipping
- Hose attaches to heater with quick connect fittings
- Easy maintenance - one bolt removes burner and controls
- Nest & stack for easy storage - perfect for the rental industry
- Minimum 100lb cylinder required
- 5-8 Hour run time
- Clearance: 4ft on sides, 8ft above

Commercial Unit Heaters

Separated combustion unit heaters obtain 100% of their combustion air from outside, ensuring that nothing but clean, fresh air is burned in the combustion chamber. A low-profile design allows quick and easy installations. Ideal solution for heating commercial workspaces like warehouses, workshops, or greenhouses. Inexpensive to install, easy to use, and time tested for quality and durability.

Commercial Tube Heaters

Re-Verber-Ray premier, low-intensity infrared heaters ensure comfortable and efficient heating for your space. These gas-fired heaters are constructed with the highest quality materials and range from 50,000 BTUs up to 200,000 BTUs. The HL3 series heaters have fewer on/off cycles compared to single stage units thanks to its patented two-stage operation. The single stage DX3L, a sibling to the HL3 Series, works well in applications with low air changes, evenly heating your space without the need for the high-fire quick recovery of a two stage unit. Also available for Natural Gas.

Low-Clearance Tube Heaters

Single and two-stage infrared radiant tube heaters with the bonus of low clearances to combustibles, the LD3 and LS3 Series are a no-brainer for applications requiring low mounting heights. The lower BTU range and short length options mean this heater fits well in mezzanines, small restaurant patios, or your home garage. Maintenance is a cinch with tool-free access to the control compartment. These heaters can also be designed in a U- or L-shaped configuration to fit tighter spaces.

High-Intensity Infrared Ceramic Heaters

The DR Series infrared ceramic heaters represent the preferred method of spot heating a portion of a large space. This unvented heater is commonly used in areas of high air filtration, high ceilings, and spot heating applications such as warehouses, manufacturing and maintenance facilities, distribution facilities, etc. Specify 25 Volt or 120 Volt when ordering Spark Ignition models.
